Good Morning,

Attached are the results from our 2nd Quarter water sampling of sites L-18-G and L-12-A in the Turtle Canyon Lease Area ECCR is seeking to acquire. This recent baseline data is associated with item 2 on deficiency letter Task # T-21793. Tom Suchoski stated that once the new DOGM website is operating, we can add these two sample points. 3rd quarter was damp at both of these sites and no sample was able to be taken. Please reach out with any questions or concerns on this matter.

Thank you,

Jesse Candelaria

Hi Jesse-

This information actually needs to be submitted as part of your Lease Modification application package. We need the data from the samples, including the fact that there was not enough water to sample during 3rd quarter to be included in Chapter 7 as part of the documentation to support the rule requiring baseline data collection on the lease expansion areas. Also, we don't add monitoring locations to our database until the application has received final approval. At that point you'd be able to go back and add the sampling that was done as part of baseline data collection.

Subject: Lease modifications Administrative Completeness Review, Emery County Coal Resources, Inc., Lila Canyon Mine, C/007/0013, Task #T-21793

Dear Mr. Candelaria:

The Division has completed its initial Administrative Completeness Review (ACR) of the recently submitted lease modification amendment. The Division has identified areas where additional information is needed prior to determining that the application is administratively complete. Please provide the following information:

1. The Permittee must use the approved version of the MRP when submitting changes to the Chapter 7 Hydrology section.
2. Recent baseline data is required to complete section R645-301-724.

Please resubmit the entire application with the additional information provided. If you have any questions, please free to contact myself (385) 290-9937 or Justin Eachtel (385) 799-0029.

Sincerely,

Steve Christensen
Coal Program Manager
